

# TONER STORE

Product Quality is Our Prime Directive | Since 1990

When you first install the cartridge with the used OEM Chip, the following 2 messages will flash in sequence every 3 seconds until you press ok.

Once you press OK, the cartridge is good for the life of the toner, even if the printer is power cycled or the cartridge is taken out and shaken and reinstalled. It will continue to display the "ready" message below until a new toner is installed.

So the instructions are basically insert the toner, wait till it registers, hit OK, and then you are good to go for the life of the toner.

The page count itself won't be accurate, if you want to keep track of page counts, you would need to record the page count when you first install it and the page count when it is completed.
